

## De-saturation

For this project, you will be creating a photograph that has had the colour removed and then selected areas re-coloured. You may use an assortment of tools in Photoshop to re-colour various aspects of your photo

Please keep in mind the following:

- Create your new image so that it is 8.5"x11" and 300dpi This is imperative!
- Save often to your folder on "Save Here" or to your flash drive. There are even online storage sites with free storage. There is no reason for losing your work!
- I would like you to upload all your best work to your Flickr site Create a set if you are doing more than one image
- You will need to save a copy on your flash drive to give to me to print
- Please hand in the JPEG only!
- You may find using the feather command helps blur edges to create a gentle transition between colour and B+W
- The Gradient tool is an excellent tool to use! See this video for some extra tips!

Do something amazing!
