

Shutter test:

Look at the 2 photos below. Which one of them was taken at a slower shutter speed, “A” or “B”?

“A”

“B”

2. What does the
“B” stand for on the
shutter speed dial?

3. Does a shutter speed of $1/125$ of a second allow more or less light to reach the film than a shutter speed of $1/4$ second?

4. If you are using a 50mm lens, what is the slowest shutter speed that you should use to avoid blur?

If you need to use a slow shutter speed, what can you do to avoid unintentional blur? (circle one)

- a) Brace yourself and the camera against a wall or stationary object
- b) Use a tripod
- c) Stop breathing for a moment
- d) All of the above
